

The Superior Remote I/O System

Warranty now extended to 3 years

- + Reliable and future-oriented for your facilities
- + Developed and tested for extreme conditions as well
- + Tried and tested all over the world in the harshest industry environments

As of now 3 years extended warranty covering all **IS1+** components

For more than 25 years, IS has been the remote I/O system that has been installed most often in hazardous areas all over the world. Together with customers and users, R. STAHL is continuously working on extensions and improvements. With this experience, R. STAHL can realize almost all of your tasks.

➔ With R. STAHL as a competent partner by your side, you will save valuable time.

The latest IS1+ modules have been **especially designed for harsh industry environments** with a temperature range of -40 °C up to +75 °C. For this, a unique Low-Power Design with a very low power dissipation and a heat-repelling enclosure has been developed on the basis of the latest technology.

Significantly longer service life and saving of energy of up to 50 % with the new modules. Extensive stress tests – for example in temperature of more than 90 °C – show the ruggedness of the modules. This is exactly the sort of safety you desire for your facility.

You can get more information about the new IS1+ modules on www.is1plus.com and on our Youtube channel (<http://www.youtube.com/user/RSTAHLGROUP>). Please contact your R. STAHL expert. He will gladly answer your questions and inform you about the current **upgrade campaign**.

You security for planning, operation and maintenance of your facilities:

- As of now we grant an extended warranty of three years for all IS1+ system components
- Future-oriented interfaces like Profibus and Ethernet are compatible with all control systems
- Comfortable integration into different Asset-Management systems
- The new IS1+ is 100% downwards compatible with installed IS1 systems

Gain more freedom with IS1+ and apply yourself to the important topics of the future.
