

- Motor switching capacity AC-3 and AC-23 acc. to IEC 60947-3, EN 60947, DIN VDE 0660 part 107

## MY R. STAHL 8537A

- With or without load-shedding contact
- Positive opening operation of the main contacts
- Isolating characteristics acc. to DIN VDE 0660
- Can be locked in the "OFF" position with padlocks
- Rotary actuator with clear switch position
- Highly corrosion-resistant external components
- Identified by a signal orange label "Safety switch"

Safety switches ensure that machines and system parts are disconnected from the energy supply during cleaning and repair work as a mandatory requirement. Usual preparatory work such as removal of fuses or disconnection of motors, which can be performed only by electrically skilled persons, is no longer required.

| Selection Table |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
